Saikumarreddykondaigari

## PROFILE

I am an enthusiastic individual eager to leverage my expertise in software development while continuously seeking opportunities for personal and professional growth. Proficient in Java, Spring Framework, Spring Boot, and CI/CD practices, I have a strong foundation in building scalable and efficient applications. My passion lies in creating innovative solutions that streamline day-to-day activities and enhance user experiences.

## SKILLS

Java
Spring Boot
PostgreSQL
Docker
Kubernetes/Jenkins
Power BI

## EDUCATION

Vellore Institute of Technology

2016-2021 CGPA 8.67

MTech Integrated (SE)

## CERTIFICATION

Java Programming: Solving Problems with Software

Big Data Essentials: HDFS, Map Reduce and Spark RDD

Detecting and Mitigating Cyber Threats and Attacks

Machine Learning with Python – Level 1 (Issued by IBM)

## EXPERIENCE

Software Technologist | Sr. Software Engineer | Software Engg, Vitrana

Aug 2023 - Present

In my recent role, I developed a robust Maven- based application for pharmaceutical pharmacovigilance, leveraging the Spring Framework and microservices architecture to ensure scalability and modularity. I designed and implemented a new service from the ground up, focusing on efficient data handling and compliance with industry standards. To enhance application performance, I integrated Redis for caching, significantly reducing response times for frequently accessed data. I utilized JPA and JPQL with Hibernate to facilitate efficient database interactions, ensuring seamless data persistence. Developed multiple tools for Dev and QA. Leading Playwright team

Associate Software Engineer, Vitrana

Oct 2021 – Jul 2023

Supported existing Spring Boot microservices by developing inter- and intra-module APIs to enhance system integration and functionality. Implemented the Mockito testing framework to ensure robust unit testing and maintain high code quality.

Applied R&D Engineer 1 / Software Intern, Nokia

Jul 2020 – Aug 2021

Developed test automation and application development using a Behavior-Driven Development (BDD) approach, leveraging Java with JUnit and Python with Flask. Additionally, I designed and implemented APIs using the Spring Framework for a comprehensive 360-degree website management tool, ensuring seamless integration and functionality across various modules.
